

Bugs, issues

1. Forest & Lily Nature Wedding

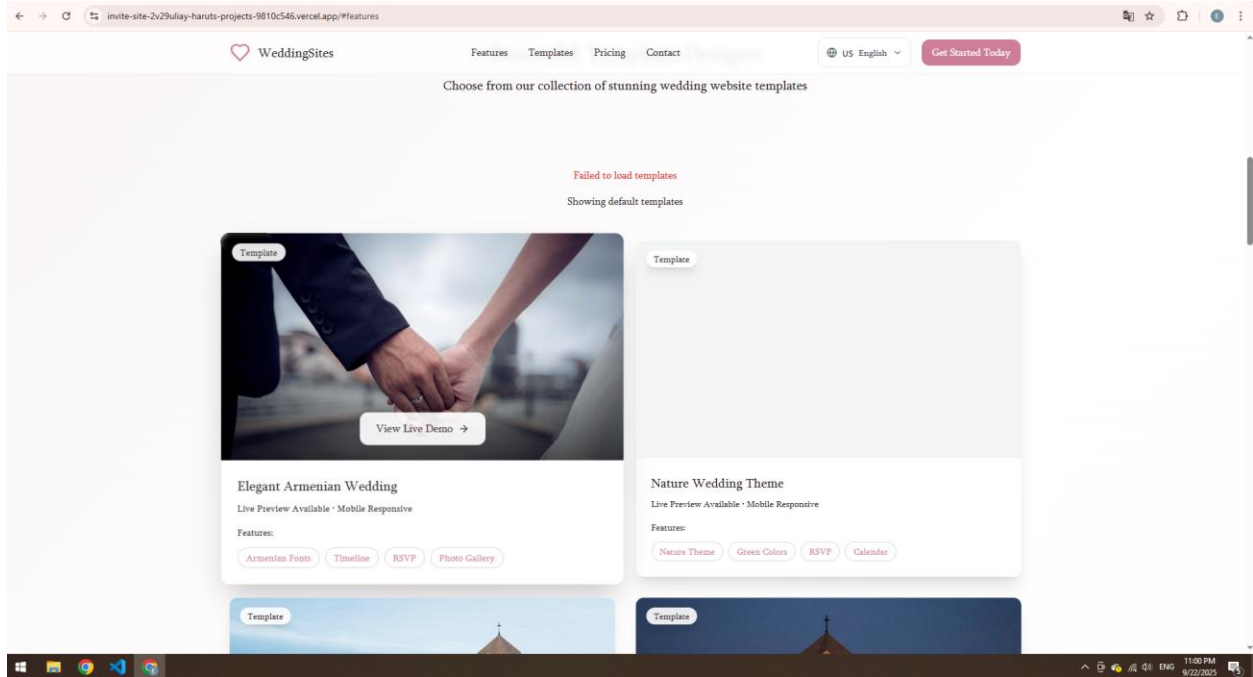

1.1 First image is not displaying

1.2 One text is displayed as [object Object] Theme

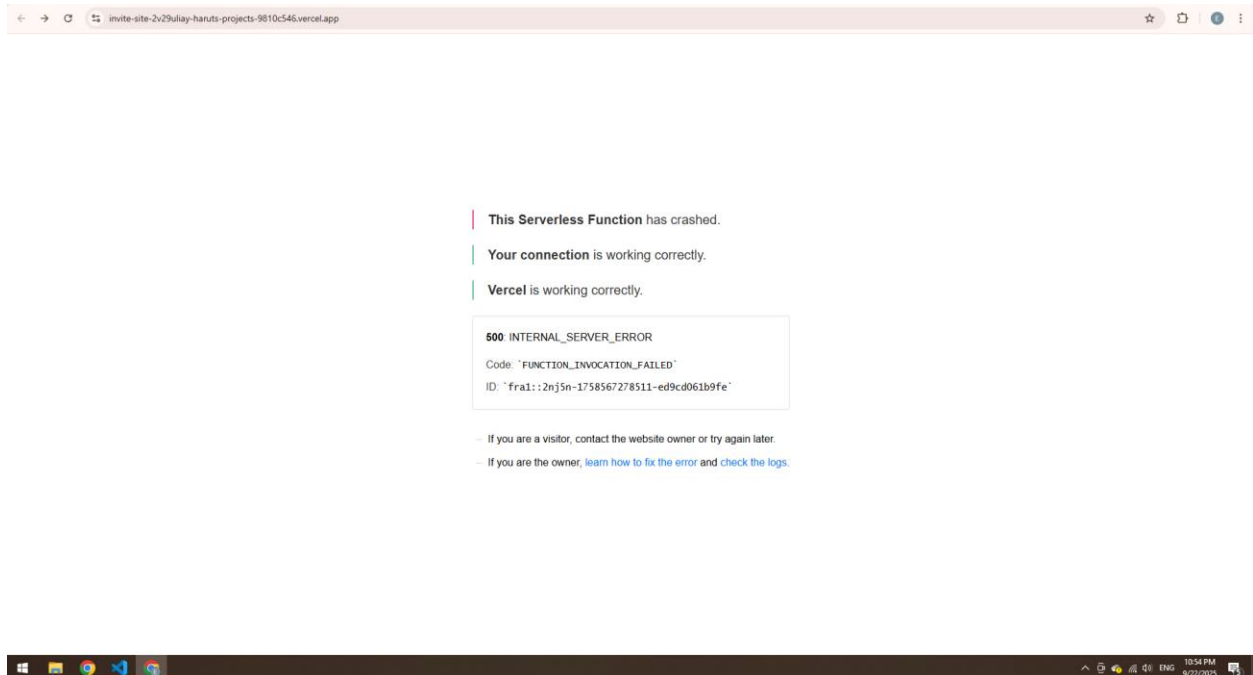

2. In all templates there is one text displayed as [object Object] Theme

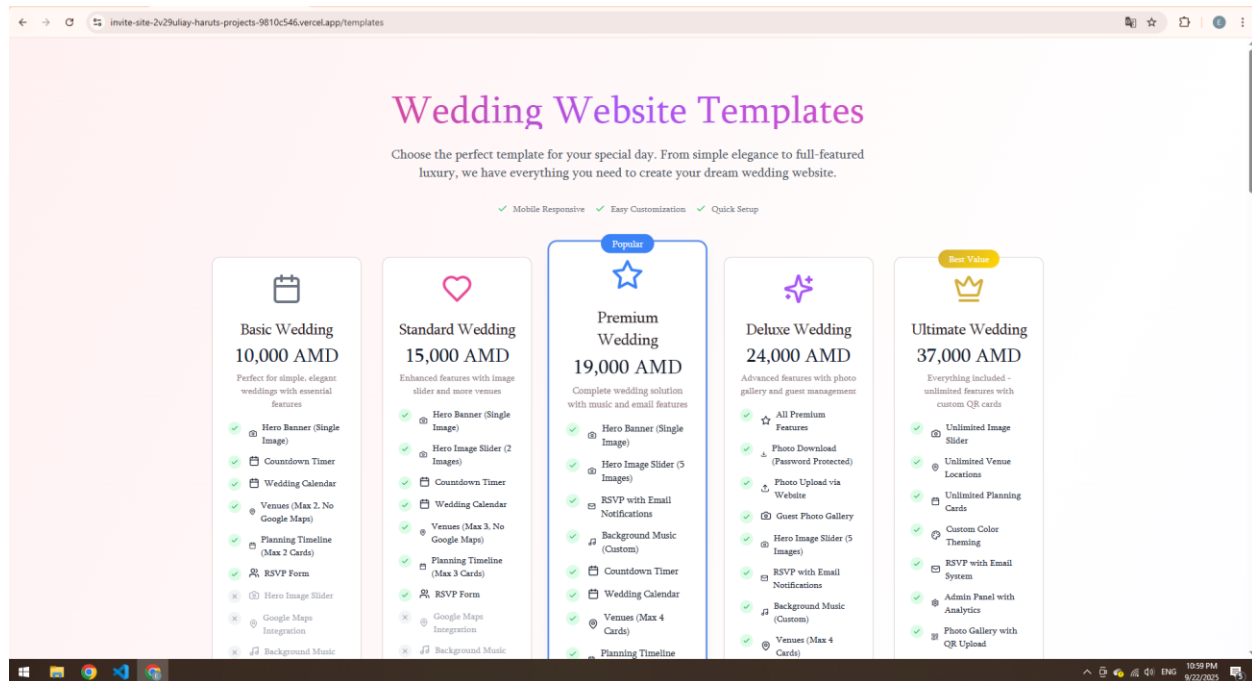

3. After opening the **Forest & Lily Nature Wedding** template and going back with browser's left arrow, an error message failed to load templates appears and wrong templates are being shown (after refreshing the page the correct templates are displaying)

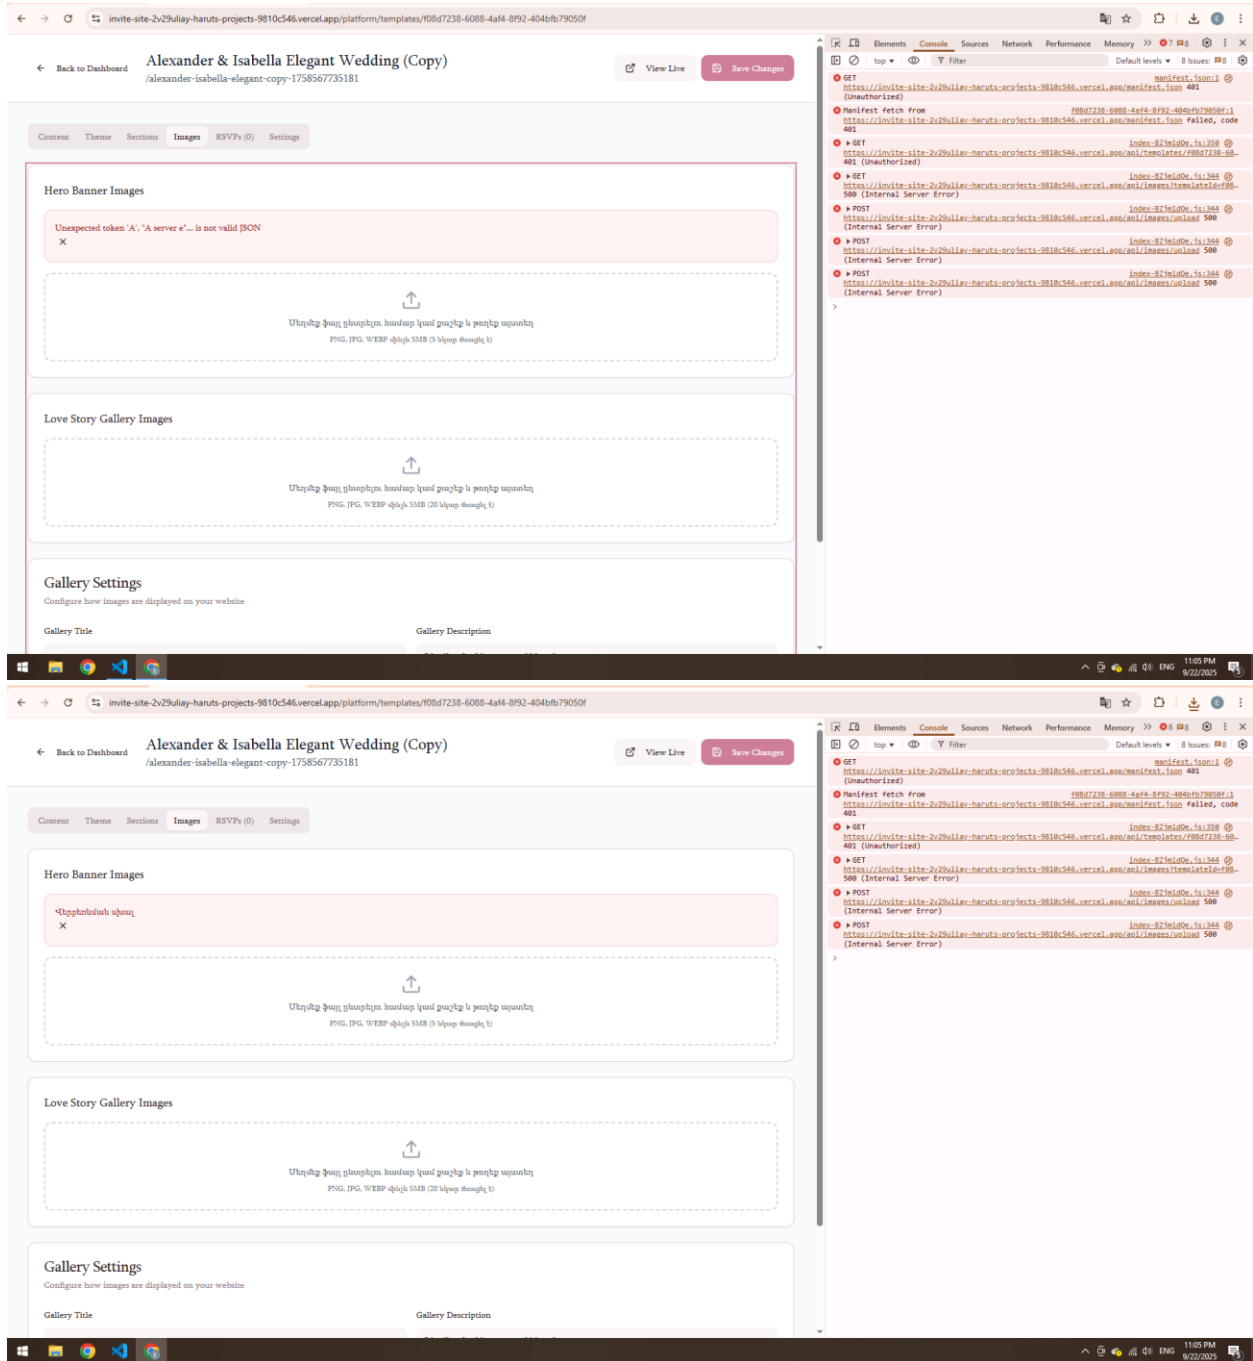

4. From time to time while previewing templates or refreshing the main page, the website is being crashed (after one more refresh it works again)

5. When clicking the templates link from the header of the main page, the header disappears and it's not possible to go back to the main page.

6. It's not possible to upload an image from the /platform

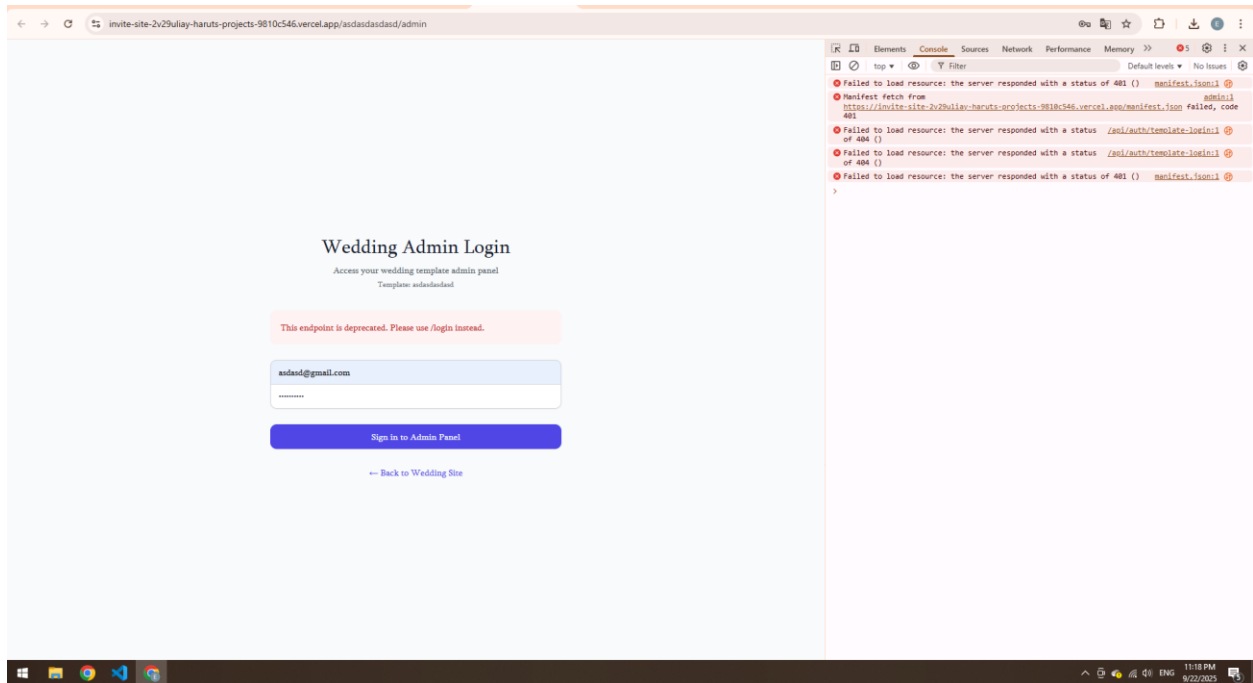

7. It's not possible to upload image for the Wedding Venues

The screenshot shows a web application interface for managing wedding venues. The 'Wedding Venues' section is active, displaying a form for 'Location 1: New Location'. The form includes fields for 'Reception Details', 'Location Image' (with a 'No image uploaded' message and a 'Failed to upload image. Please try again.' error), 'Full Address', 'Latitude' (e.g., 40.7128), 'Longitude' (e.g., -74.0060), 'Location Title' (e.g., New Location), 'Venue Name' (e.g., St. Ann Church), and 'Description'. A 'Map Button Text' field is set to 'Open in Map'. The Chrome DevTools console on the right shows a series of network requests, many of which resulted in 'Internal Server Error' (500). The errors are related to uploading images and fetching data from the backend.

8. It's not possible to fill the latitude and longitude fields; nothing happens while typing

This screenshot shows the same 'Wedding Venues' form, but with a focus on the 'Latitude' and 'Longitude' fields. The 'Latitude' field contains the value 'e.g., 40.7128' and has a red border, indicating a validation error. The 'Longitude' field contains 'e.g., -74.0060'. The Chrome DevTools console on the right shows a series of network requests, many of which resulted in 'Internal Server Error' (500). The errors are related to uploading images and fetching data from the backend.

9. It's not possible to login the created user's admin panel (ultimate template buyer)

10. After creating a new customer (ultimate) and clicking the generated URL, the template is not opening.
